

Rapid Assessment

See what your move would cost, and where,
in as little as 2 hours.*

30 minutes or less
to set up

Rapid Assessment compares what you run today with up to four target clouds: AWS, Microsoft Azure and Oracle Cloud Infrastructure (OCI), plus Google Cloud for VMware environments. You see what you would pay on each, and where you can save right now. Start with a billing or RVTools file and no access to your environment, or connect through read-only cloud APIs for a fuller picture. There are no agents to install.

File uploads can return results in as little as 2 hours. API connections take up to 48 hours, depending on the number of accounts and the size of your estate.

Built for

- Cloud-to-cloud moves
- VMware to cloud
- Comparing clouds before a renewal, consolidation or repatriation

Why Rapid Assessment

- **Build your business case before you commit.** Compare total cost of ownership across up to four target clouds, side by side.
- **Find savings you can act on today.** See underutilized and orphaned resources flagged.
- **Arrive ready for migration funding.** Get a SKU-level bill of materials you can take into hyperscaler funding conversations. Available for AWS, Azure and OCI targets.
- **Get started with almost no effort.** Setup takes 30 minutes or less. There are no agents, and the file option needs no access to your environment.

Two ways to start

Upload a file.

Share a cloud billing export, or an RVTools export from VMware. Matilda never connects to your environment.

Results	In as little as 2 hours
Sources	Billing files from AWS, Azure and Google Cloud. RVTools from VMware.
You get	Cost comparison, TCO workbook and bill of materials. RVTools files add VMware readiness.

Connect through APIs.

Grant read-only API access to your cloud accounts.

Results	Up to 48 hours
Sources	AWS, Azure and OCI
You get	The same cost comparison, TCO workbook and bill of materials, plus a complete asset inventory and a security, compliance and best-practice report.

Where Rapid Assessment fits

Rapid Assessment is its own offering and the entry point to the Matilda Cloud platform. It answers why to move and what it would cost. When you are ready to plan how, Matilda Discover profiles your applications in depth.

Ready to plan your move? Start with Discover.

Matilda Discover maps your applications and how they connect. It covers dependencies and end-of-life software, services and databases, and groups your applications into migration waves.

Moving VMware workloads as they are?

For lift-and-shift data center exits, an RVTools-based Rapid Assessment can lead directly into Matilda Migrate.

*File-based assessments, measured from receipt of the file. Timing varies with the size and complexity of the estate. API-connected assessments take up to 48 hours.

Capabilities

- **Cross-cloud workload mapping.** AI-assisted analysis maps each workload to its equivalent services on your target cloud, based on what you consume today.
- **Savings recommendations.** Flags underutilized and orphaned resources.
- **Security, compliance and best-practice checks.** Flags configuration issues against cloud best-practice frameworks. (API connection.)†
- **Cost comparison and projected savings.** Projects your costs on each target cloud and calculates your projected savings as a percentage of current spend.
- **Asset inventory.** Builds a complete inventory of compute, storage and network components. (API connection.)
- **VMware readiness.** For VMware environments assessed through RVTools, flags operating systems and infrastructure nearing end of support, ranks migration priority, and recommends a migration approach for each workload.

Supported moves	To AWS, Azure or OCI	from AWS, Azure, Google Cloud, OCI or VMware
	To Google Cloud	from VMware

What you get

Every assessment is delivered as a ready-to-share package in PDF, PowerPoint and Excel.

DELIVERABLE	WHAT'S INSIDE	CONNECT	
		UPLOAD A FILE	THROUGH APIs
Executive summary	Current versus target-cloud cost, projected savings and recommendations, built for leadership	✓	✓
TCO workbook	Resource- and service-level costs and a SKU-level bill of materials	✓	✓
VMware readiness	End-of-support analysis, migration priority and recommended migration approach	✓ RVTools only	
Asset inventory	A complete list of discovered cloud assets		✓
Security and compliance report†	Configuration issues and best-practice gaps		✓

Secure by design

- **No agents.** Nothing to install on your workloads.
- **No access needed** when you start with a billing or RVTools file.
- **Read-only** when you connect, so Matilda can view but never change your accounts.
- **SOC 2 Type II** attested for security, availability and confidentiality.
- **ISO/IEC 27001:2022** certified information security management system.

Request your free assessment.

Hyperscaler funding programs can cover the cost for eligible customers, so you can build your business case before you commit budget.
