

Platform Modernization to AWS

Client: Jaldee
Location: India
Industry: Healthcare
Duration: 8 weeks

Executive Summary

Jaldee is a business platform primarily focused on healthcare vertical. The business is growing rapidly and has very high transactions.

The Platform offers as a SaaS based solution for healthcare providers, professionals and other businesses and establish their brand to acquire direct customers and retain them.

Jaldee's objective is to provide an integrated, and robust application for managing appointments, queues, telehealth, multichannel bookings, payment processing, billing, customer wait predictions etc.

Challenges

Having high transactions in the healthcare industry, the availability of the Jaldee platform is crucial. The successful customer was observing the overall growth and wanting to ensure that the cloud native features are leveraged and deployed in complete automated fashion. The objective of the Jaldee platform was that it should be scalable, reliable and configured for high availability.

The client desired to safeguard their platform running at Optimized way for the cost, along with AWS best practices needed to be implemented.

How did Matilda help them?

Matilda suite of Discovery, Assessment and Migration products helped the client identify the current landscape, applications dependencies mapping and running in AWS using Cloud native services. Deep insight app dependency and generating IaC allowed customer to establish the standardization following AWS best practices.

Matilda platform enforced governance policies along with making sure all resources were tagged appropriately. The Platform, later also integrated with Customer notification engine.

Matilda platform redesigned the application for Cloud enablement to ensure applications can scale and support high availability. Platform kept the client engaged in the whole process and carried migration in a secure way.
